

## Photoshop for Photographers

**Question** - What's the difference between the *Photoshop for Photographers* videos and the other Photoshop videos on this site like Layers, or Shooting Raw?

**Answer** - The modern photographer must have image editing skills and in the past I had always tried to isolate Photoshop subjects like [Shooting Raw](#) – [Selections](#) - [Layers](#), to make learning a little easier.

However, digital photography and image editing has matured to a point that shooting raw images is a must, even as a beginner. So, I took the view that there were many people who would benefit from a Photoshop course that covered all the skills, but in a measured way.

That's why I've structured Photoshop for Photographers to incorporate a bit of all the editing skills you're going to need, in the order you're most likely to need them. Photoshop for Photographers includes: [Camera Raw](#), [Layers](#), [Selections](#) and much more.

Photoshop for Photographers may be suited to those who are newer to photography and Photoshop. but not exclusively so. The videos start off with what you need to know first and then what you need next and so on.

I have used all my experience to take you into the learning of Photoshop in the best way possible. Other videos on this site like selections raw and layers are more dedicated to those subjects. They could be more appealing to someone who has a little experience of Photoshop. Someone who wants to improve their skills in a specific area such as Layers.
